

Per-patient Spearman: 9mer main vs 8-11mer variable-window aperture (effN>=8)

Source: R1_recomputed_effN8.csv (9mer) + R1_recomputed_8to11mer_effN8.csv (8-11mer). Per-patient Spearman rho, Fisher-z averaged over patients with effN>=8. Only tools applicable to both apertures shown; DeepNetBim / NeoaPred excluded (9mer-only: 8-11 max identical to 9mer max).
